# Hybrid radio

**EBU Webinar**  
**3<sup>rd</sup> May 2011**

EBU TECHNICAL  
European Broadcasting Union

# Webinar plan

---

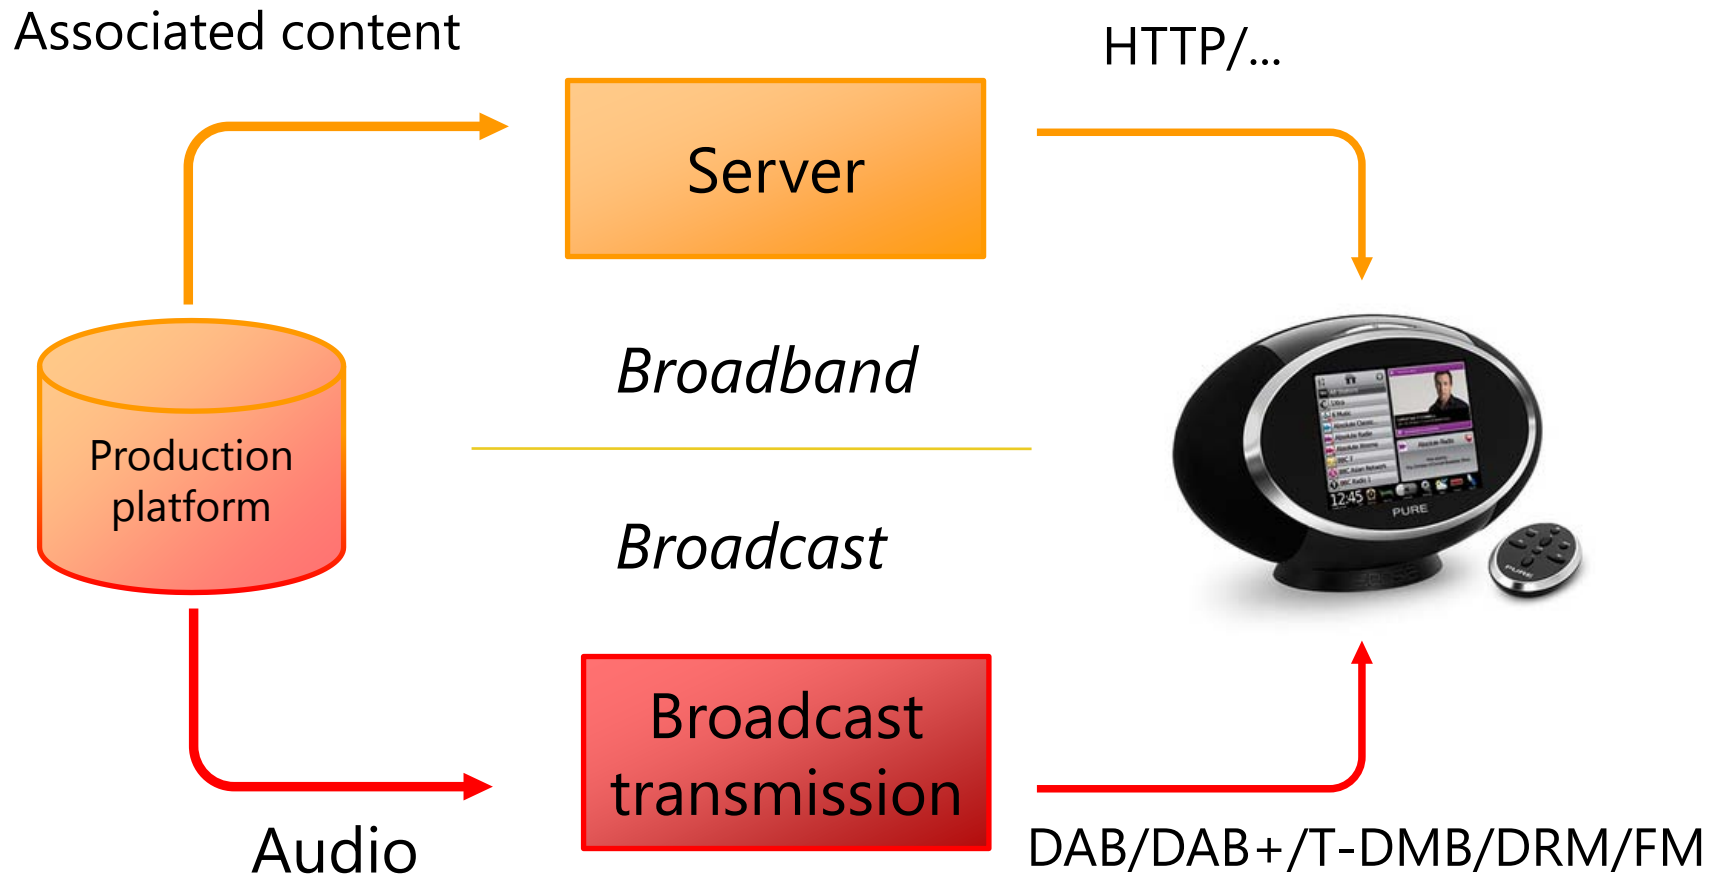

- What is hybrid radio ?
- Why hybrid radio ?
- How does it work ? RadioDNS
- How do I start ?

# What is hybrid radio ?

# Hybrid broadcast/broadband approach

# Why hybrid radio ?

# Combine the benefits of broadcast and broadband IP

- The power of broadcast
  - Efficient one to many delivery
  - Free to air, no subscription needed
  - Horizontal market
- The power of broadband
  - On demand
  - Interactivity
  - Profiling

# Target: New devices with more than just audio...

- New radio capable devices

- Colour screen
- Interactive controls
- Very often with Internet connection
- Integration in multimedia devices (players, phone, car nav, etc)
- Hardware tends to become generic (micro PC platforms)
- Possibility sometimes to create your own application

# Example of new services

- Visuals (≠ TV !)
  - Branding
  - Associated program information (CD covers, news stills, etc)
  - Non associated program information (Traffic webcams, etc)
  - Visuals are clickable (to related website for more information)

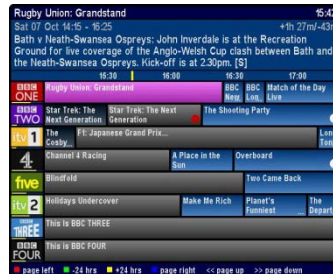

# Visualisation gets ready in the car

*DAB+ slideshow in a VW car. (Available also in Audi cars)*

# Example of new services

- Program guides
- Tagging
- Voting
- Small applications

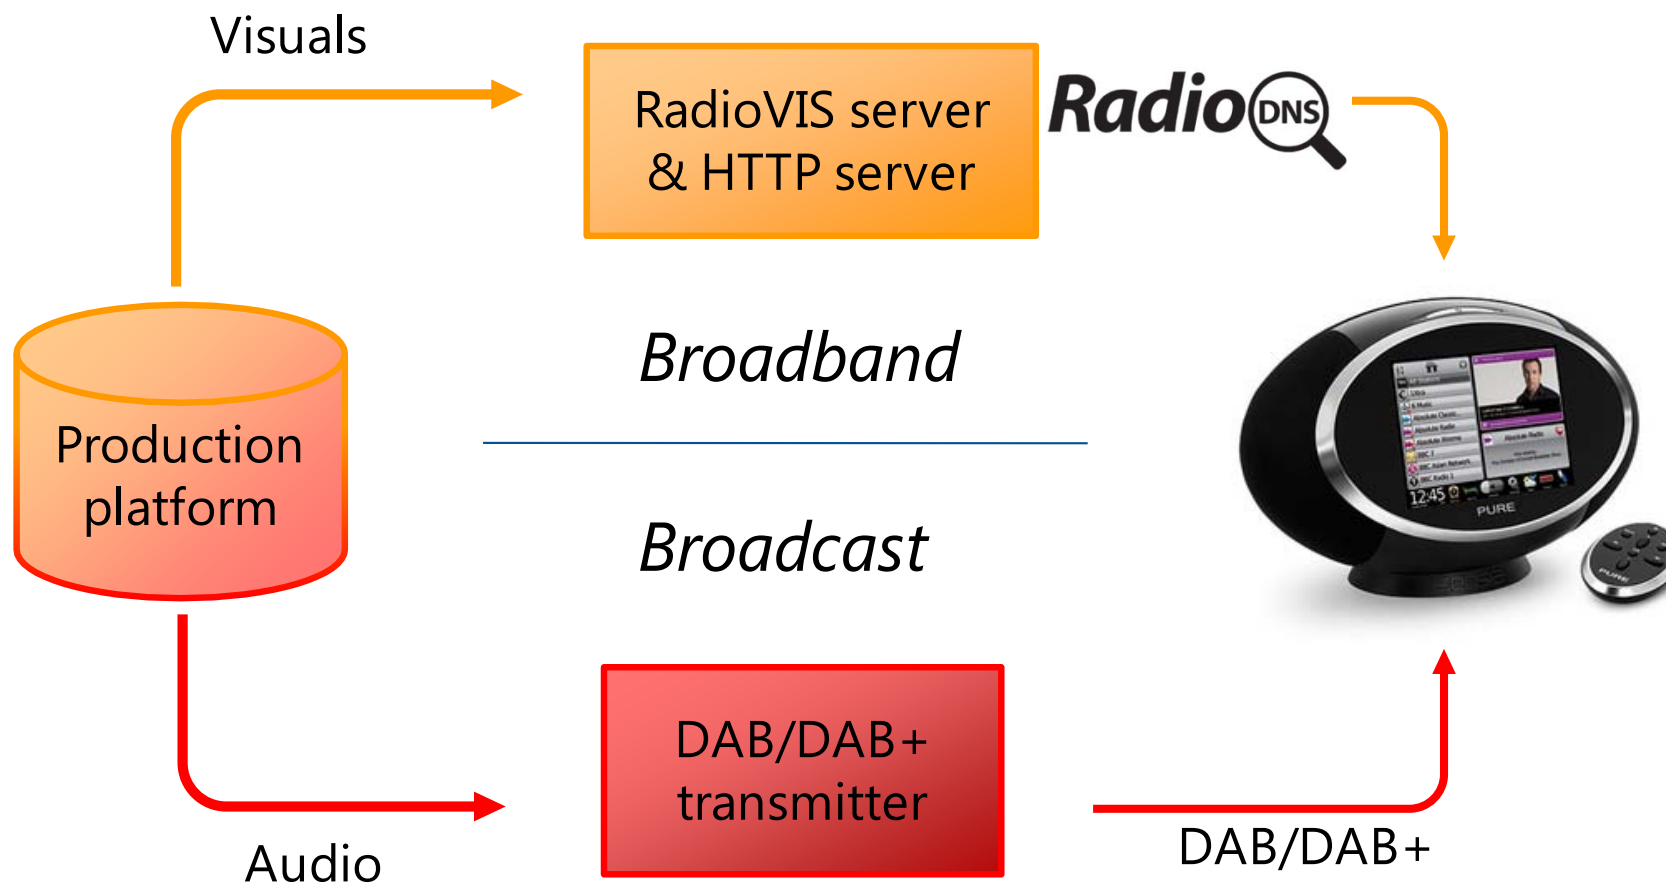

# How does it work ?

# Hybrid Broadcast/Broadband with RadioDNS

*DAB/DAB+ and RadioVIS*

# RadioDNS, a simple explanation (RadioVIS example)

Hello, I'm an hybrid radio receiver.

I'm receiving radio Gaga and I'm located in Iceland

I would like to display visuals. Can you help me ?

Hybrid Radio receiver

Hello, Radio Gaga registered to us

Here the DNS server address they gave us where you can go to find information about their services.

Goodbye

RadioDNS.org DNS server

# RadioDNS, a simple explanation

Hello, do you display  
visuals for radio Gaga ?

Hybrid Radio receiver

Hello, yes we have  
visual for this radio. I  
give you the RadioVIS  
server address to get  
them.

Goodbye

DNS server of the broadcaster

# RadioDNS, a simple explanation

Hello, give me visuals  
for radio Gaga

RadioVIS server  
of the broadcaster

Hybrid Radio receiver

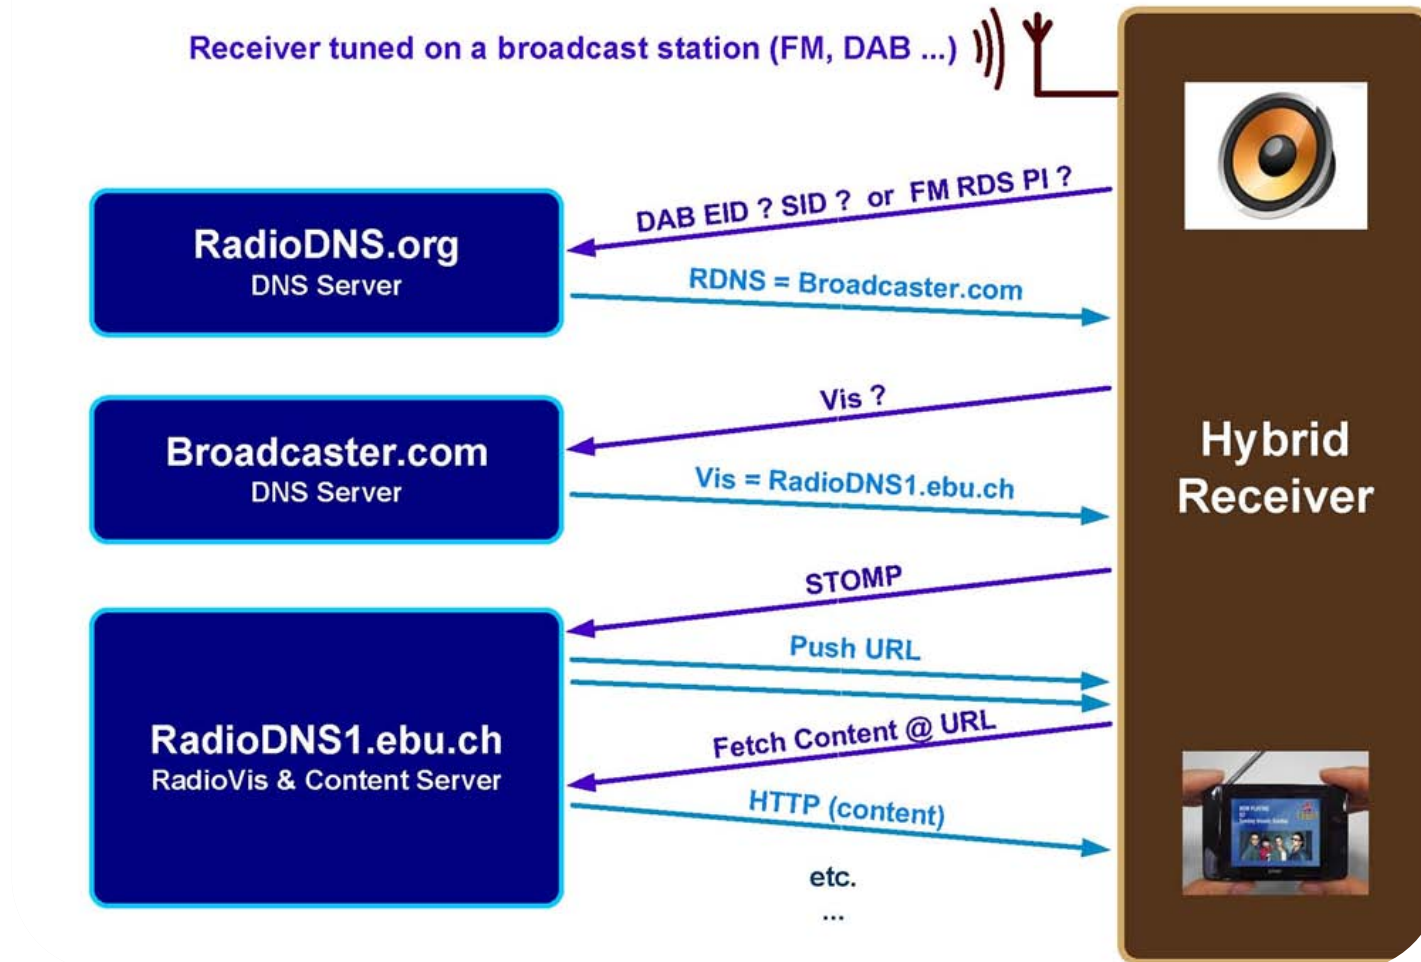

Yes sir

Here's the weblink  
where you can  
download the current  
picture

Stay on, I will tell you  
everytime a new visual  
is available

# RadioDNS, a less simple explanation

## RADIO DNS: Hybrid Receiver Dialog

# RadioDNS applications

---

*Slideshow*

*Electronic Program  
Guide*

*Tagging*

*Opened to other applications...*

# RadioDNS today (1 year old)

- An organisation of broadcasters and manufacturers
  - Membership offers the right to vote and decide on strategic direction
- 500-600 stations registered (~100 have real services)
  - It is not necessary to be member to register a station

# RadioDNS receivers

- Pure Sensia (RadioDNS with FM or DAB/DAB+)
- Frontier Silicon just announced RadioDNS support in Venice chipset
- Any mobile phone with a tuner (FM or DAB) is ready for RadioDNS applications
  - API needed.
  - Successful development on Nokia N900 / Sony XPeria (Global labs), Samsung Galaxy (CRC FM-RDS library)

# Other ways of doing hybrid radio

- DAB/DAB+ slideshow on the Nokia N8 with DAB headset
- Clickable slides
  - JPEG images transmitted via DAB XPAD
  - Embedded URL in JPEG header (custom development by Nokia)

*A demonstration by Nokia, Swisscom, Rouge FM, EBU Technical for the Geneva Motorshow 2011*

# How do I start ?

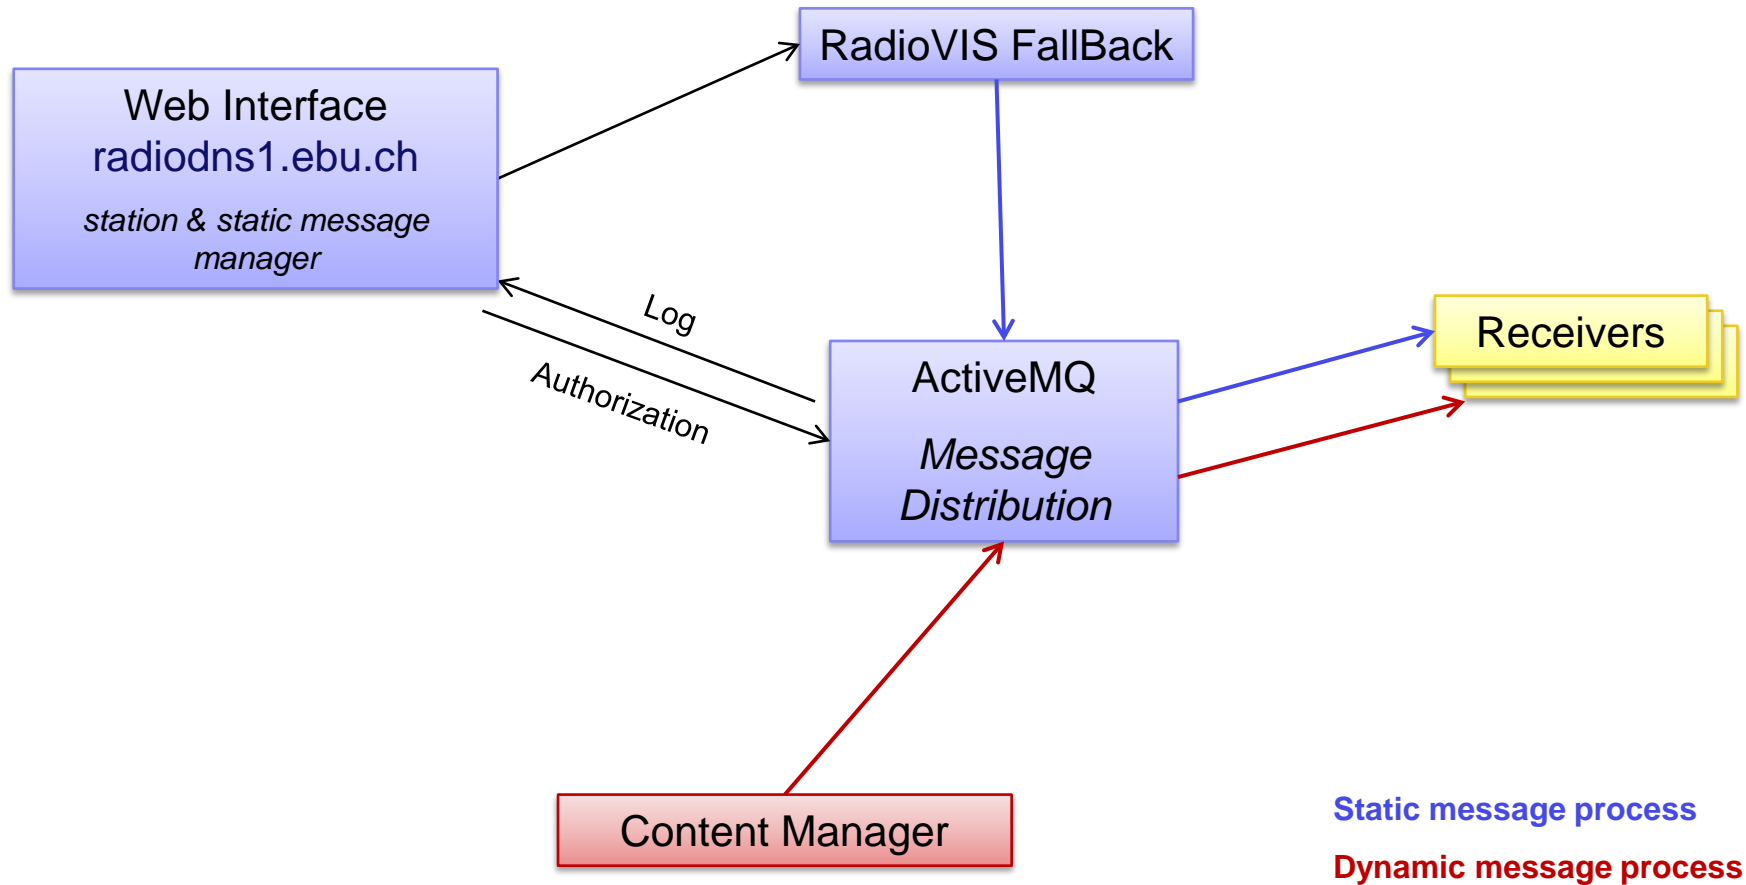

# How to start

---

- RadioDNS infrastructure need is simple (web technologies)
- Many open source tools already exist
- Registration in RadioDNS.org is free (at the moment)
  - Read the FAQ on the website
- Challenge for broadcasters: adapt their production platforms, create or adapt content
- EBU Technical has created a simple RadioVIS server for broadcasters to start or experiment
  - Static visualisation (logo or brand)
  - Possibility to change it dynamically

## NEW STATION

The system allows users to create several station to gather the different topics and visuals.

**station name**

# EBU RadioVIS Server: Station topics

The screenshot shows the EBU RadioVIS Server interface for a station named 'myStation'. At the top left, there is a 'Stations' dropdown menu with 'myStation' selected. To the right of this, there are links for 'se déconnecter' and 'Hide tips'. The main heading is 'STATION ID: myStation'. Below this, there is a horizontal menu with three options: 'topic' (selected), 'static visual & txt', and 'history/monitor'. The 'topic' option is accompanied by a small icon. The main content area is currently empty, with the word 'empty' displayed in blue text. On the right side, there is a 'Tools' section with four options: 'New topic', 'Import from zone file', 'Export to zone file', and 'Gallery of myStation', each with a corresponding icon.

# EBU Radio production platform

*Distributed architecture*  
*Modular blocks*  
*Network communication*

<http://code.google.com/p/ebu-radio-production/>

# Conclusions

# Content is the key => Broadcasters: Be creative !

- Create a compelling offer
- Think of associated content to the program
  - Visuals, text, additional audio content
- Integrate Production: Produce once distribute to many
- Push your web content to the listeners with hybrid radio

# The goal

- Same experience whether it is distributed via broadband only, hybrid broadcast/broadband or broadcast only

For users:

- Enjoy their favourite radio services whatever the platform

For broadcasters:

- Enhance the radio experience
- Keep an efficient and reliable distribution with broadcast

# Conclusion

---

- Hybrid radio brings a new experience to radio while securing an efficient and independant broadcast delivery

- RadioDNS is an easy way to start whether you are on FM, DAB, DRM, AM with AMSS, HD Radio,...
- EBU has developed an experimental platform for you to start or experiment
- Concentrate on your production platform
- Value your web content with hybrid radio
