

## **SAND BOX+ LIVE IP**

### VRT, EBU and technology partners

#### Overview

The LiveIP Project is a multi-vendor system integration to showcase IP-based live broadcast production using open standards.

This is the result of collaboration between VRT Sandbox, EBU and a group of innovative technology partners: Axon, Dwesam, EVS, Genelec, Grass Valley, Lawo, LSB, Nevion, Tektronix and Trilogy; who provide all the elements of a live production chain driven by IP.

This demonstration is a scaled down version of the proof-of-concept that is implemented at the VRT's premises in Brussels. It is operated by TV production teams to study the usability of IP for live.

#### Key messages

- Live media production over IP is achievable today
- Multi-vendor systems can be integrated using open standards
- Featuring key functionality like clean switching and redundancy
